

KARTHICK RAJA

DATA ANALYST · POWER BI DEVELOPER · BUSINESS INTELLIGENCE

Chennai, TN | +91-6383268445 | karthiikarthii46@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Results-driven Data Analyst & Power BI Developer with hands-on experience designing end-to-end Business Intelligence solutions across Finance, Banking, Manufacturing, and Sales domains. Proficient in SQL, Python (Pandas, NumPy), Power BI (DAX, Power Query), and ETL pipeline development — processing 150K–600K+ records with measurable improvements in reporting accuracy and decision-making speed. Adept at translating complex datasets into clear, actionable dashboards for business stakeholders. Seeking a Data Analyst / BI Analyst role to drive data-driven decisions at scale.

PROFESSIONAL EXPERIENCE

Data Analyst Intern | Besant Technologies, Chennai

FEB 2026 – Present

- ▶ Cleaned, validated, and transformed 600K+ records using Python (Pandas) and Excel — applying deduplication, null handling, outlier detection, and type standardization to reduce data quality errors by ~30% and deliver analytical-ready datasets for downstream reporting.
- ▶ Designed and deployed 5+ interactive Power BI dashboards featuring KPI cards, drill-through pages, dynamic slicers, bookmarks, and conditional formatting — enabling self-service analytics for non-technical business stakeholders across Finance, Banking, and Sales domains.
- ▶ Developed 40+ optimized SQL queries including Joins, Aggregations, Subqueries, CTEs, and Window Functions supporting KPI reporting, trend analysis, and ad-hoc analytical requirements with output validated against source data.
- ▶ Built advanced DAX measures for MTD, QTD, YTD, Running Totals, SAMEPERIODLASTYEAR, MoM Variance %, and Growth Rate calculations — powering time-intelligence reporting and enabling period-over-period executive analysis across multiple business domains.
- ▶ Designed and executed end-to-end ETL pipelines using Python — data extraction, multi-step Panda's transformations, loading into MySQL, and post-load validation checks — ensuring reliable, accurate data models for Power BI consumption.
- ▶ Conducted Exploratory Data Analysis (EDA) using Python (Matplotlib, Seaborn) to surface patterns, anomalies, and performance opportunities — translating statistical findings into actionable business insights for stakeholder presentations.
- ▶ Automated repetitive reporting and data-processing workflows using Python scripts — reducing manual effort by ~40% and improving operational efficiency across the analytics team.
- ▶ Collaborated with cross-functional stakeholders to gather business requirements, define KPI frameworks, and deliver BI solutions aligned with organizational reporting objectives.

TECHNICAL SKILLS

Power BI & Business Intelligence: Power BI, DAX, Power Query, KPI Dashboards, Business Intelligence, Data Visualization, Dashboard Development, Looker Studio

SQL & Databases: SQL, MySQL, Joins, Aggregations, Subqueries, CTEs, Window Functions, Query Optimization

Python: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Automation, EDA, Data Processing

Data Engineering & Modeling: ETL Pipelines, Data Cleaning, Data Transformation, Star Schema, Data Modeling, Data Validation

Excel & Reporting: Pivot Tables, VLOOKUP, XLOOKUP, Conditional Formatting, Business Reporting, Reporting Automation

Cloud & Tools: Microsoft Azure, Power BI Service, Blob Storage, Git, GitHub, Streamlit

PROJECTS

Banking Performance Dashboard · Power BI · SQL · DAX · Excel

- ▶ Analyzed 150K+ banking transactions (₹4.87 Billion total transaction value) to monitor transaction volume, success rates, failure rates, tax collection, fees, and customer activity — designing a star-schema data model and building a Power Query ETL pipeline to transform raw MySQL data into analytical-ready datasets.
- ▶ Developed 20+ DAX measures — Transaction Success Rate %, Failure Rate %, Average Transaction Value, MTD/QTD/YTD Volume, MoM Growth %, and SAMEPERIODLASTYEAR comparisons using CALCULATE, SUMX, DIVIDE, and FILTER — enabling time-intelligence reporting across customer segments, regions, and transaction types.
- ▶ Wrote 15+ SQL queries using Joins, CTEs, Aggregations, and Window Functions (RANK, LAG) to extract segmented KPI datasets from MySQL and cross-validate Power BI aggregations against source records, ensuring 100% reporting accuracy.
- ▶ Delivered a 4-page interactive dashboard with conditional formatting thresholds (green/amber/red), state-wise transaction heatmap, drill-through failure analysis page, and dynamic bookmarks — replacing static monthly Excel reports and reducing report generation time from 3 days to on-demand access.
- ▶ Root-cause analysis on failed transaction patterns — segmented by region, customer type, and transaction category — identified 3 high-failure segments responsible for ~60% of operational errors, supporting targeted interventions that cut manual investigation effort by ~35%

API Performance Monitoring & Analytics System · Python · MySQL · Power BI · DAX

- ▶ Architected an end-to-end API analytics platform processing 100K+ transaction logs — designed a 6-table normalized MySQL schema indexing on high-frequency filter columns, and automated a Python ETL pipeline for extraction, Pandas transformation, MySQL loading, and post-load validation.
- ▶ Developed 40+ analytical SQL queries using CTEs, Window Functions (RANK, PERCENTILE_CONT, LAG, LEAD), Aggregations, and Stored Procedures — computing KPIs: API Success Rate %, Error Rate %, Average Response Time (ms), P95/P99 Latency, SLA Breach Rate %, Request Volume per Endpoint, and a composite API Health Score.
- ▶ Built advanced DAX measures using CALCULATE, AVERAGEX, PERCENTILEX.INC, and RANKX — enabling dynamic latency percentile analysis, endpoint health ranking, and SLA compliance monitoring filterable by service, environment, and time window.
- ▶ Delivered a 4-page Power BI dashboard covering API health overview, endpoint drill-through, latency distribution analysis, and failure root-cause — published to Power BI Service with scheduled refresh, eliminating manual log inspection and providing real-time operational visibility.
- ▶ Root-cause analysis identified 3 critical endpoints responsible for 68% of total API errors — findings directly informed engineering prioritization, enabling targeted resolution and measurable improvement in overall service reliability.

Business Performance & Customer Intelligence Dashboard · Power BI · SQL · DAX · Excel

- ▶ Developed a 5-page enterprise BI solution analyzing \$2.3M revenue, \$286K profit, and 9,994 customer orders — built an optimized star-schema model with Power Query transformations including fiscal calendar generation, product category hierarchies, and customer ID standardization.
- ▶ Implemented 25+ advanced DAX calculations — MTD Revenue, QTD Profit, YTD Sales, Running Total Revenue, MoM Growth %, YoY Variance, SAMEPERIODLASTYEAR, Gross Profit Margin %, Discount Impact Analysis, and Average Order Value using SUMX, AVERAGEX, CALCULATE, and DIVIDE — powering full executive time-intelligence reporting.
- ▶ Engineered customer RFM segmentation (Recency, Frequency, Monetary) using DATEDIFF, COUNTROWS, and SUMX DAX patterns — analysis identified top 8% of customers contributing 42% of total revenue, enabling targeted retention and upsell strategy recommendations for commercial leadership.
- ▶ Designed cohort retention analysis using month-of-first-purchase grouping — identified a 23% drop in Month-2 customer retention and built product profitability rankings using TOPN and RANKX, surfacing high-margin opportunities and slow-moving inventory patterns to support pricing and inventory strategy.
- ▶ Automated dashboard refresh via Power BI Service, replacing weekly manual Excel reporting — reducing report preparation time from 2 days to real-time on-demand access and improving decision-making speed across the sales leadership team.

CERTIFICATIONS

- ▶ Extract, Transform and Load Data in Power BI — Microsoft
- ▶ Harnessing the Power of Data with Power BI — Microsoft
- ▶ Preparing Data for Analysis with Microsoft Excel — Microsoft
- ▶ GenAI for Data Analytics — WsCube Tech
- ▶ Data Science Certification — Besant Technologies

EDUCATION

B.E. Computer Science & Engineering

2022 – 2026

Hindusthan Institute of Technology, Coimbatore | CGPA: 7.2
